Building the Futuristic **Blockchain Ecosystem**

Audit Report FOR

BlockXpress

OVERVIEW

The Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks.

According to the smart contract audit:

 Audit Result	Passed
 KYC Verification	Done
 Audit Date	14 Oct 2022

PROJECT DESCRIPTION

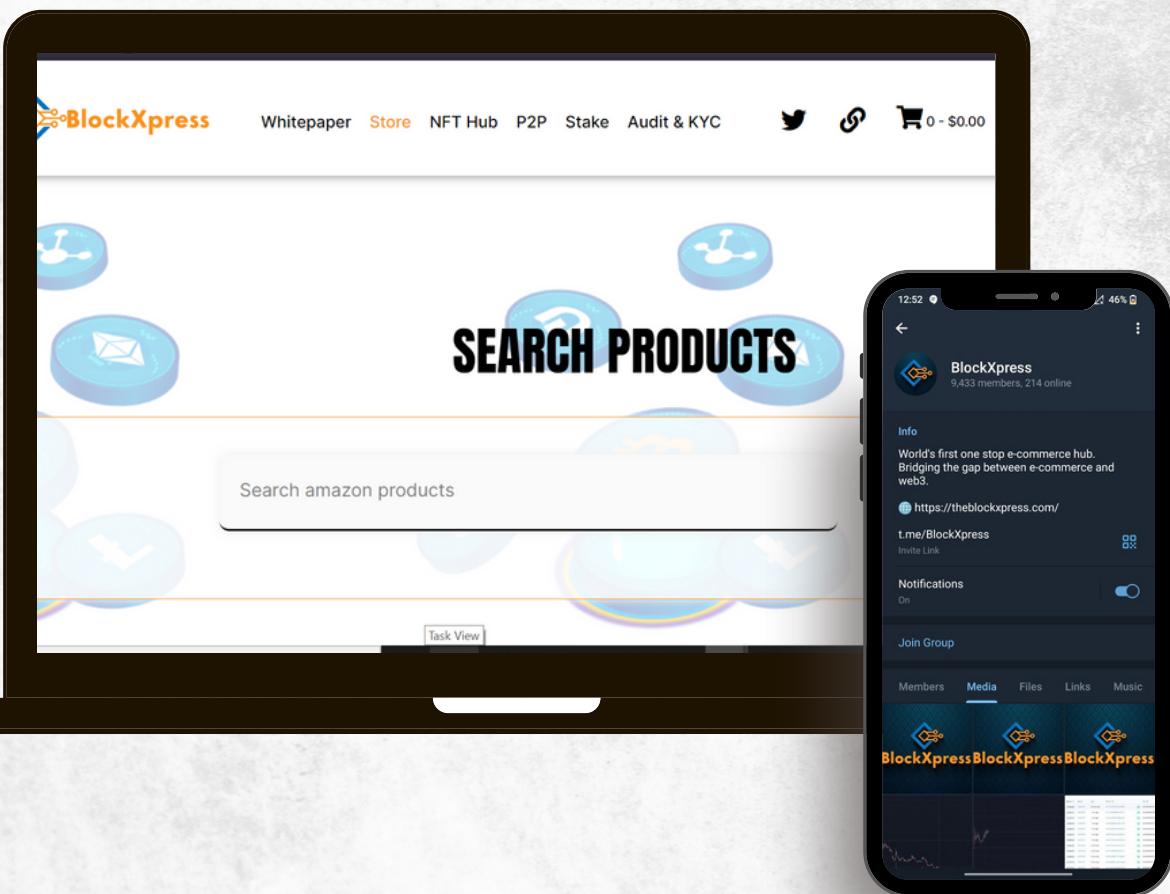

BlockXpress

Bridging decentralisation and commerce in one platform at the ease of convenience to every userbase is our main focus. In the era of progression and innovation, time is the most valuable resources people have. Our goal is to make things easier for every userbase to bridge blockchain and commerce in the most efficient and reliable way

CONTRACT DETAILS

Token Name

BlockXpress

Symbol

BX

Network

BSC

Language

Solidity

Contract Address (Verified)

0xab7c0BD0d31AD7BbfB8c979Cc1393426F99cC980

Token Type

ERC 20

Total Supply

21,000,000

Compiler

v0.8.17+commit.8df45f5f

License

None

Contract SHA-256 Checksum:

4A2AC2573D491E18CB0342A8ACFACC6206C391D09B95275C5BF82EE806353269

AUDIT METHODOLOGY

Audit Details

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

Audit Goals

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

Code Quality

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
- Back-doors
- Vulnerability
- Accuracy
- Readability

Tools

- DE
- Open Zeppelin
- Code Analyzer
- Solidity Code
- Complier
- Hardhat

FUNCTION OVERVIEW

Can Take Back Ownership	Not Detected
Owner Change Balance	Not Detected
Blacklist	Not Detected
Modify Fees	Detected
Proxy	Not Detected
Whitelisted	Not Detected
Anti Whale	Not Detected
Trading Cooldown	Not Detected
Transfer Pausable	Not Detected
Cannot Sell All	Not Detected
Hidden Owner	Not Detected
Mint	Not Detected

VULNERABILITY CHECKLIST

Design Logic	Passed
Compiler warnings.	Passed
Private user data leaks	Passed
Timestamp dependence	Passed
Integer overflow and underflow	Passed
Race conditions & reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious Event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zeppelin module	Passed
Fallback function security	Passed

RISK CLASSIFICATION

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

High Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Medium Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Low Risk

Issues on this level are minor details and warning that can remain unfixed.

Informational

Information level is to offer suggestions for improvement of efficacy or security for features with a risk free factor.

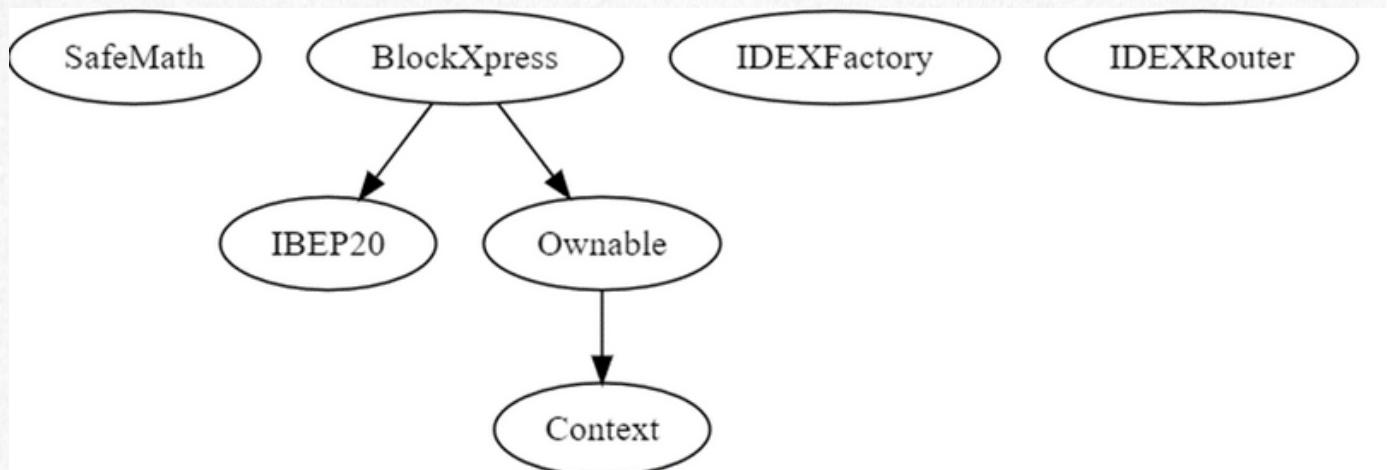

AUDIT SUMMARY

Ownership:

0xBfE474a01Bf0D11D71EE2Bf4a10D78e7B0f369ff, is the owner of the contract

Contracts & Inheritance Tree:

all of below contracts are in this audit scope

Summary

- A Simple AutoLiquidity ERC20 token, there is currently 3% tax on buy and 3% on sells
- Anti-Bot functionality, meaning all the buyers/sellers at first block after launch will get taxes 99%

MANUAL AUDIT

Severity Criteria

Expelee assesses the severity of disclosed vulnerabilities according to a methodology based on OWASP standards.

Vulnerabilities are divided into three primary risk categories: **high**, **medium**, and **low**.

High-level considerations for vulnerabilities span the following key areas when conducting assessments:

- Malicious Input Handling
- Escalation of privileges
- Arithmetic
- Gas use

Overall Risk Severity				
Impact	HIGH	Medium	High	Critical
	MEDIUM	Low	Medium	High
	LOW	Note	Low	Medium
		LOW	MEDIUM	HIGH
Likelihood				

Findings Summary

- **High Risk Findings:** 0
- **Medium Risk Findings:** 0
- **Low Risk Findings:** 0
- **Suggestions & discussion:** 1
- **Gas Optimizations :** 1

Gas Optimizations

- unnecessary operation at `getTotalFee` function:

```
if(selling) { return totalFee.sub(0); }
```

Suggestions

- **using unnecessary library SafeMath: since compiler version is > 0.8.0, all overflow/underflow errors are handled internally by the compiler and using SafeMath only increases the gas usage.**

ABOUT EXPELEE

Expelee is a product-based aspirational Web3 Start-up. Coping up with numerous solutions for blockchain Security and constructing a Web3 Ecosystem from Deal making platform to developer hosting open platform, while also developing our own commercial and sustainable blockchain.
